Program Regrade Request
Attach to front of graded hardcopy
Be complete but concise

Name: _______________________________________________ Date: ________________

Assignment: ___________________________________ Class: ______________________

1. (Yes/No) _____ I understand that I should only request regrading when I have a credible
   justification. This is not an opportunity to request a regrade of an assignment to see if it helps. I
   understand that abuse of the regrade request may result in a lower grade.

2. (Fill in the blank – e.g., love, despise) I _______ fluffy bunnies and myself as a person.

3. (Yes/No) _____ I have carefully read the test document and executed the full test on my original
   program submission. I conducted my tests on one of the department Linux boxes (unless
   otherwise specified) using all compile/JVM options given in the test document. Below are all
   additional special options, etc. that I used to execute the tests.

4. List the specific (sub)tests to be reconsidered. For each (sub)test to be reconsidered, select the
   grounds for regrade from the list below:
   Correct Solution - You believe your submission to be correct. Make sure to include if you believe
   that 1) the grading is simply incorrect according to the test, 2) the specification is flawed
   (ambiguous), and/or 3) the test is flawed. Be sure to include your justification for each claim.
   Reconsideration – At the time of submission, you believed your solution to be correct and well
   tested; however, the test document focused on some particular element that you missed (e.g.,
   your program works everyday but Wednesday). The burden is on you to demonstrate 1) you
   heavily tested your code and 2) some part of the test (which you missed) disproportionately
   impacted your grade. You must include the changes to your code to fix the problem.
